## **Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1. (Currently Amended) A method of processing incoming data, comprising:

storing historical data for the destination host;

receiving incoming data; and

determining whether to employ that stateless routing of the incoming data is to be employed based on the stored historical data for the [[a]] destination host associated with the incoming data, wherein the stored historical data is independent of the incoming data.

2. (Currently Amended) The method of claim 1, further including:

determining that stateless routing is to be employed; and

storing the incoming data only in volatile memory when stateless routing is to be employed.

Amendment Dated: October 8, 2008

Reply to Office Action Mailed: June 12, 2008

Attorney Docket No. 101610.55983US

3. (Original) The method of claim 2, further including withholding

confirmation of receipt of the incoming data until confirmation of delivery is

received from either the destination host or a downstream router.

4. (Original) The method of claim 3, wherein a copy of the incoming

data is to be stored in nonvolatile memory by a sender of the incoming data until

the confirmation of receipt is received at the sender.

5. (Original) The method of claim 3, further including:

receiving the confirmation of delivery; and

sending the confirmation of receipt toward a sender of the incoming data.

6. (Original) The method of claim 2, further including aborting the

stateless routing by storing the incoming data in nonvolatile memory and

sending confirmation of receipt of the incoming data toward a sender of the

incoming data.

7. (Canceled)

Serial No. 10/735,696 Amendment Dated: October 8, 2008 Reply to Office Action Mailed: June 12, 2008 Attorney Docket No. 101610.55983US

- 8. (Currently Amended) The method of claim <u>1</u> [[7]], wherein the historical data includes at least one of previous stateless routing outcomes and previous routing latencies.
- 9. (Original) The method of claim 8, further including calculating a success rate probability based on the previous routing outcomes.
- 10. (Original) The method of claim 8, further including calculating a weighted latency average based on the previous routing latencies.
- 11. (Currently Amended) The method of claim 1, further including: receiving control data, wherein the determination [[; and determining whether]] to employ stateless routing is also based on the control data.
- 12. (Original) The method of claim 11, wherein the incoming data is received in a data channel and the control data is received in a control channel.

Amendment Dated: October 8, 2008

Reply to Office Action Mailed: June 12, 2008

Attorney Docket No. 101610.55983US

13. (Original) The method of claim 11, wherein the incoming data

and the control data are received in a data channel.

14. (Original) The method of claim 11, wherein the control data

includes at least one of a time-to-live value, a hop count value and a maximum-

hop value for the incoming data.

15. (Original) The method of claim 14, further including reducing at

least one of the time-to-live value and the maximum-hop value if the incoming

data is associated with a plurality of destination hosts.

16. (Original) The method of claim 1, further including either caching

or generating a binary decision representative of whether stateless routing is to

be employed.

Amendment Dated: October 8, 2008

Reply to Office Action Mailed: June 12, 2008

Attorney Docket No. 101610.55983US

17. (Original) The method of claim 16, wherein the incoming data is

associated with a plurality of destination hosts, the method further including:

generating a binary decision for each of the plurality of destination hosts;

and

performing an AND operation between each of the binary decisions to

represent whether stateless routing is to be employed.

18. (Original) The method of claim 1, further including generating a

probability decision representative of whether stateless routing is to be

employed.

19. (Original) The method of claim 18, wherein the incoming data is

associated with a plurality of destination hosts, the method further including:

generating a probability decision for each of the plurality of destination

hosts; and

multiplying the probability decisions together to represent whether

stateless routing is to be employed.

Attorney Docket No. 101610.55983US

20. (Original) The method of claim 1, wherein the incoming data is

received over a first connection, the method further including sending the

incoming data toward the destination host over a second connection, the first and

second connections being part of a virtual circuit.

21. (Original) The method of claim 20, wherein the sending of the

incoming data begins before completion of the receiving of the incoming data.

22. (Original) The method of claim 1, wherein the incoming data

includes a message.

Attorney Docket No. 101610.55983US

23. (Currently Amended) A method of processing messages

comprising:

storing historical data for one or more destination hosts;

receiving control data;

receiving a message over a first connection, the message being associated

with the one or more destination hosts;

determining whether to employ that stateless routing of the message is to

be employed based on the historical data and the control data;

storing the message only in volatile memory and withholding confirmation

of receipt of the message if it is determined that stateless routing is to be

employed;

sending the message to the one or more destination hosts over additional

connections forming one or more virtual circuits;

receiving confirmation of delivery from one or more destination hosts

associated with the message; and

sending the confirmation of receipt to a sender of the message.

Amendment Dated: October 8, 2008

Reply to Office Action Mailed: June 12, 2008

Attorney Docket No. 101610.55983US

24. (Original) The method of claim 23, wherein a copy of the message

is stored by the sender of the message in nonvolatile memory until the

confirmation of receipt is received at the sender.

25. (Original) The method of claim 23 wherein the historical data

includes at least one of previous stateless routing outcomes and previous

stateless routing latencies.

26. (Original) The method of claim 23, wherein the control data

includes at least one of a time-to-live value, a hop count value and a maximum

hop value for the message.

27. (Original) The method of claim 23, further including generating a

binary decision representative of whether stateless routing is to be employed.

28. (Original) The method of claim 23, further including generating a

probability decision representative of whether stateless routing is to be

employed.

Reply to Office Action Mailed: June 12, 2008

Attorney Docket No. 101610.55983US

29. (Original) The method of claim 23, wherein the sending of the

message begins before completion of the receiving of the message.

30. (Currently Amended) A computer readable medium encoded

with computer executable instructions to:

store historical data for the destination host;

receive incoming data; and

determine whether to employ that stateless routing of the incoming data is

to be employed based on [[a]] the historical data for the destination host

associated with the incoming data, wherein the stored historical data is

independent of the incoming data.

31. (Currently Amended) The medium of claim 30, wherein the

instructions are further capable of being executed to:

determine that stateless routing is to be employed; and

store the incoming data only in volatile memory.

Amendment Dated: October 8, 2008

Reply to Office Action Mailed: June 12, 2008

Attorney Docket No. 101610.55983US

32. (Original) The medium of claim 31, wherein the instructions are

further capable of being executed to withhold confirmation of receipt of the

incoming data until confirmation of delivery is received from either the

destination host or a downstream router.

33. (Original) The medium of claim 32, wherein a copy of the

incoming data is to be stored in nonvolatile memory by a sender of the incoming

data until the confirmation of receipt is received at the sender.
